

KL4-V VIDEO PLAYER

The KL4-V Video Player is designed to produce screen advertising content in leisure, hospitality and retail environments.

Content is stored on an internal hard-drive and is played out as a vision-only video stream. The system can either be part of a managed network, where our account management team ensure that design, scheduling and updating of content meets your marketing and commercial objectives, or can be user-managed via our playlisting and scheduling portal KV-CMS.
